Customer Journey Map

Electric Vehicle Market Performance & Insights

Date	26 October 2026	**Team ID**	
Project Name	Electric Vehicle Market Performance & Insights	**Team Member**	Self

Journey overview

This map describes how an EV market decision-maker uses the project to move from understanding the supplied dataset, to exploring interactive Tableau analysis, and finally communicating findings. The personas and journey are project-design assumptions, not results of real customer interviews.

Journey element	Stage 1 Discover the data	Stage 2 Explore the analysis	Stage 3 Interpret & share insights
Actions ***What does the customer do?***	• Identifies questions about EV manufacturers, sales, battery types, range and customer ratings. • Opens the project website and reviews the project overview. • Checks the dataset scope and available fields.	• Opens the Tableau dashboard and selects relevant filters. • Compares manufacturers, battery technologies, ranges and ratings. • Uses the eight visualisations to explore patterns.	• Opens Story 1 for market performance and Story 2 for technology/customer insights. • Reviews patterns and limitations before drawing conclusions. • Shares the website, dashboard and story links with stakeholders.
Touchpoints ***What part of the service do they interact with?***	• Project homepage and overview section. • Supplied ev_market_test.csv dataset and methodology description. • GitHub repository and README.	• Embedded Tableau Public dashboard. • Dashboard filters, charts and KPI summaries. • Direct link to open the full Tableau dashboard.	• Tableau Story 1: EV Market Performance. • Tableau Story 2: EV Technology and Customer Insights. • Public website and GitHub project documentation.
Customer thought ***What is the customer thinking?***	• What information is available in this dataset? • Which questions can this project answer? • Are the data definitions and limitations clear?	• Which manufacturers have higher recorded sales in this dataset? • How do range and battery capacity vary across records? • Are customer ratings available for all records?	• What are the most useful patterns to communicate? • Am I distinguishing record counts from real-world market share? • Can others access and understand the analysis?
Customer feeling ***What is the customer feeling?***	• Curious about the available insights. • Cautious about data quality and scope. • Wants a clear starting point.	• Engaged when filters and comparisons are easy to use. • May feel overwhelmed by many charts or categories. • Needs confidence in chart labels and aggregations.	• Confident when the stories are clear and traceable. • Concerned about over-interpreting synthetic/test data. • Satisfied when findings are easy to share.
Process ownership ***Who is in the lead on this?***	• Self – project author: prepare the dataset, explain its scope and maintain the project overview.	• Self – project author: build, validate and maintain the Tableau visualisations and dashboard.	• Self – project author: publish the stories, maintain links and present findings with limitations.
Opportunities ***How can we improve this stage?***	• Add a concise data dictionary and explain key fields. • State missing-value handling and dataset limitations. • Provide clear navigation to the dashboard.	• Keep chart titles, units and aggregation definitions consistent. • Make dashboard sizing and filters easy to use on desktop and mobile. • Show missing-data caveats where relevant.	• Add concise takeaways to each story point. • Keep direct links to both stories and the repository. • Clearly state that the supplied dataset is a test dataset and findings are not verified global market statistics.

Scope note: The supplied ev_market_test.csv is treated as a test dataset. Sales totals are reported as recorded annual_sales_units grouped by the relevant field; country counts represent vehicle records, not factory production volumes; battery-type counts represent dataset records, not verified real-world market share. Associations in charts do not establish causation.
