Communication

	26 October 2026
Team ID	
Project Name	Electric Vehicle Market Performance & Insights
Maximum Marks	1 Mark

Communication Plan:

This plan describes the communication approach for the individual EV analytics project. The project is completed by one team member (Self); Team ID is intentionally left blank. Channels below are suitable methods for coordinating project work and sharing progress and deliverables.

S.No	Communication Type	Frequency	Channel / Tool	Participants	Purpose
1	Team Standup	Daily / when working	Personal task checklist; project notes	Self	Review the day's tasks, priorities and blockers.
2	Progress Update	Weekly	Project notes; GitHub repository	Self; instructor / reviewer when required	Summarise completed work, pending tasks and next steps.
3	Issue / Bug Discussion	As Needed	Tableau Public; GitHub Issues / notes	Self; instructor / reviewer if guidance is needed	Record chart, data, publishing or website issues and their resolution.
4	Stakeholder Review	Bi-Weekly / at milestones	Published website; Tableau dashboard and stories	Self; instructor / evaluator	Review whether the dashboard answers the project questions and is understandable.
5	Final Demo Rehearsal	Once before submission	Website and Tableau Public; screen recording	Self	Check navigation, dashboard, both stories and presentation flow.
6	Final Submission Update	At submission	SkillWallet / course submission portal	Self; evaluator	Submit report, repository, website, Tableau links and required evidence.

Communication Challenges & Resolutions:

The entries below document practical project communication and coordination challenges addressed by the project workflow; they are not claims of formal team meetings or stakeholder interviews.

S.No	Challenge Faced / Consideration	Resolution / Action Taken
1	Keeping project information and deliverable links organised.	Maintained a central GitHub repository and public website, with direct links to the Tableau dashboard and both stories.
2	Explaining charts without overstating what the supplied test dataset represents.	Added methodology notes describing missing values and clarifying that record counts are not global market share or factory output.
3	Checking that the published dashboard, stories and website are ready for review.	Used the published Tableau URLs and GitHub Pages site as review points; final submission evidence and demo recording should be checked before submission.
